

### OUR „DIAMOND CELL“-SOLUTION

Our technology partner, ITS-Technologies from the Black Forest, have proved that dressing the grinding wheels on Mitsubishi Electric Eroding Machines (EDM) with metallic binders is very easy, precise and cost-effective.

Mechatronics Machinery have therefore combined a wire-cutting EDM MV1200R with a Melfa RV12SDL and an ITS B-axis in an automatic production cell for grinding wheel dressing. The so-called “Diamond Cell” solution is in production at the profile grinding wheel companies companies.
